

Board & Batten

B B 7 5 0

Board and Batten panels offer a classic design that works beautifully for both residential and commercial projects. This profile is characterized by its clean lines and patterns, created by the simulated wide vertical boards and narrower 2" raised battens. Board and Batten panels are highly adaptable, making them suitable for various architectural styles. Whether you're aiming for a warm, inviting exterior or a bold, eye-catching design, these panels provide a versatile backdrop for creative expression. Especially popular in the cedar woodgrain colors.
